

ABEKO

For 40 years now, Abeko has been guaranteeing the highest quality in the professional equipment hire and in creative solutions in marine, civil and hydraulic engineering, both nationally and internationally. We are also actively involved in various demolition works and in the unloading and transferring of raw materials from ships. Our experience, technical expertise and especially our shared passion enable us to achieve the best project performance.

Projects are becoming increasingly multi-faceted, requiring a safe and environmentally responsible approach. Our primary mission is to carry out the work safely, sustainably and economically. Even during the work we continue to improve the processes. We also turn complex issues into cost-effective projects and, if necessary, we even adapt our machinery to achieve this. Do you have a complex issue? Then please let us know. We are glad to contribute to your thought processes, free of obligations.

Your partner now and in the future

Abeko stands for long-lasting relationships. Our objective is not rapid growth, because we find collaboration with our clients and maintaining good contacts more important. We consider ourselves a partner for the future and will keep investing in our development. We are open, accessible and honest. We prefer short lines in our work and no unnecessary intermediaries.

We are convinced that our way of work offers the best results. In fact, it has become the core of our existence. Since 1972!

“We also turn complex issues into cost-effective projects and, if necessary, we even adapt our machinery to achieve this.”

Hire on water

Abeko has repeatedly proved itself to be the right partner for dredging harbours, deepening and maintenance of waterways, as well as for placing stone or concrete elements in breakwater constructions. We have a multi-functional fleet, related equipment and skilled staff that can be put to use in a variety of situations, offering you a total package from tender up to the final delivery. For land reclamation and sand delivery for ground and road construction, you are also at the right place.

Demolition works

Abeko is capable of effectively carrying out all kinds of demolition works, also under water, in a responsible and sustainable way. This includes the demolition of buildings, steel factories or even lock complexes. Since the very beginning we have been active in the heavy industry, where, throughout the years, we have gained a great deal of experience. For us, your commission to us is always a challenge, however complex it may be. The object is always removed and taken away efficiently and safely. Abeko assures you it is done skilfully.

Demolition companies and contractors can rely on us for high-quality advice or for the hire of a wide range of equipment, such as state-of-the-art diggers, power shovels and conveyors. Temporary use of additional capacity can be the solution to keep their production processes on track. That is why our equipment can be hired for both short and long periods. Of course you receive intensive guidance on site from our own staff, who put their knowledge and experience to optimal use in order to achieve the best results for every project.

Stevedoring

Loading and transferring raw materials from ships is also part of our expertise. Abeko offers unloading facilities, in-house developed unloading cranes and related equipment such as conveyor belts, filters and crushers. Ships of various sizes and with diverse cargo can be unloaded at our 230-metre long ISPS-certified quay by aid of our own equipment. From the rear quay area there is good access to the land behind.

Dredging and Marine Contractor

It is always our objective to find a creative and efficient solution for issues, using all means available. In our opinion, equipment is multi-purpose, which allows us to achieve economies of scale, such as the acceleration of dredging cycles, the reduction of running times and the increase in production. We can even adapt our land equipment so that it can also be used on water. This enables us to provide just that little extra piece of creativity that is not the first thing that springs to people's minds. We persevere until we have the ultimate solution with the best value for money. As marine contractor we have all the available and required knowledge in-house: we work with the latest equipment and software and give high priority to following and implementing technological developments.

Do you want to exchange views free of obligation? Then please feel free to contact us at telephone number +31(0)251-276 070 or send an e-mail to info@abeko.nl. You can check out the fleet and equipment list on our website www.abeko.nl.

"We can even adapt our land equipment so that it can also be used on water."
